

The instructions for use can vary. It is recommended that you **always read the warnings** & instructions on the pack. Alma Importers Pty Ltd personally visits all factories and can confirm that no Child-Labour or unacceptable working conditions are involved with any of their product ranges.

1. AROMA DIFFUSERS

Reed diffusers are used to infuse any room with a subtle fragrance.

How to Use: Remove bottle and reeds from packaging, unscrew the lid and remove stopper. Replace the screw top lid and insert reeds, allowing fragrance to be absorbed for a few moments and then take reeds out and turn over, so the wet ends release an immediate fragrance. Reeds can be turned to refresh the fragrance as required.

Mini Aroma Diffuser does not require reeds, just remove stopper and invert with your finger over the holes allowing the wooden cap to become moist for the fragrance to be released.

Aroma diffusers are made from the finest quality European essential oils with a base oil and small amount of alcohol to facilitate the diffusion process.

2. OIL BURNERS

With Oil burners you can change the fragrance simply by changing the fragrant wax or oil (can be purchased separately).

How to use: Stand burner on flat surface and either add a half piece of Fragrant Wax or fill the bowl with water and add a few drops of Fragrant Oil. As the wax/oil heats it will release the fragrance immediately.

The **Aroma Crystal Gift Set** is slightly different. Place the crystals in the bowl (**do not add water**) and heat using the tealight. After time, when the fragrance needs refreshing add a few drops of fragrance to the crystals. The heat of the tealight will cause the crystals to crackle, releasing the fragrance.

3. SCENTED CANDLES – Paraffin

KARMA SENSES has two different styles of candles. The paraffin candles are scented with quality fragrant oils. They have long burning times using the highest quality pure cotton wicks. Wicks must be trimmed to approx 1 cm to help prevent sooting. Do not trim wick when candle is lit. Never leave a burning candle unattended.

SCENTED CANDLES – Soy

Soy candles are a new innovation to the candle industry. They are a water soluble wax that burns cleanly. They also have much longer burning times, liquefying during the burning process. The soy has a low melting point and contains no paraffin. KARMA SENSES soy candles are made from soy (from America) with a blend of palm wax containing quality essential oils from India. Wicks must be trimmed to approx 1 cm to help prevent sooting. Do not trim wick when candle is lit. Never leave a burning candle unattended.

Please Note: All Palm Wax used in KARMA SENSES products are from Malaysia under licence from Sustainable Palm Tree Forests (Membership Number 037-05(A)).

4. INCENSE – Incense packs

Incense should be lit with a flame and then blown out once the tip glows red. The smoke drift will emit the fragrance and continue to burn down without a visible flame. The incense does turn to ash and should be placed in a holder. The incense cones burn in the same way. Never leave burning incense unattended. Some incense packs contain floating candles. They must always be placed in water.

5. FLOATING CANDLES

Floating candles must always be placed in water before being lit. Wicks should be trimmed to about 1 cm but should never be trimmed while lit. Never leave a burning candle unattended
