

The instructions for use can vary. It is recommended that you always read the warnings & instructions on the pack. Alma Importers Pty Ltd personally visits all factories and can confirm that no Child-Labour or unacceptable working conditions are involved with any of their product ranges.

Designed in Australia

1. AROMA DIFFUSERS

Reed diffusers are used to infuse any room with a subtle fragrance.

How to Use: Remove bottle and reeds from packaging, then remove stopper. Insert reeds in neck of the bottle, allowing fragrance to be absorbed for a few moments, then take reeds out and turn over, so the wet ends release an immediate fragrance. Reeds can be turned to refresh the fragrance as required.

Aroma diffusers are made from the finest quality essential oils from India, with a base oil and small amount of alcohol to facilitate the diffusion process.

2. FRAGRANT SPRAYS

These beautifully fragranced bottles contain high quality essential oils, creating atmosphere in your home. Depress nozzle to emit 2 or 3 short bursts of fragrance. With 6 fragrances to choose from, you can change the scent to suit your mood. Do not spray directly on fabrics in case of staining or near open flames.

3. SCENTED CANDLES – Palm

MiKeRa presents Palm & Soy candles, a new innovation in the candle industry. These candles were introduced to produce an Environmentally Friendly alternative, for candle lovers.

Advantages of All-Natural Palm & Soy Candles

- Palm & Soybean Wax are biodegradable.
- Palm & Soybean Wax is a renewable, environmentally preferable alternative.
- The wax is water soluble, for the easy extraction from glass/tin containers for recycling.
- Cleaner, safer and non-toxic, these candles burn cleaner.
- An environmentally sensible alternative that is also cost competitive with paraffin.

Natural Palm Wax Candles

Palm Wax has a look and feel more like granite or marble, displaying a beautiful crystalline structure. Because of its crystalline structure the candles have greater density. The palm candles are scented with quality fragrant oils. They have long burning times using the highest quality pure cotton wicks. As Palm candles burn, a thin-layered wall is left around the outside, if there is a heat build up or leakage from the sides, the wall can be broken off. Always place on a heat resistant holder to protect from possible spillage. Wicks must be trimmed to approx 1cm to help prevent sooting. Do not trim wick when candle is lit. Never leave a burning candle unattended or burning for periods of longer than approx 3 hours.

Originating from the Palm Plant tree, palm wax is 100% vegetable oil that is extracted from renewable and sustainable resources.

All Palm Wax used in MiKeRa products are from Malaysia under licence from Sustainable Palm Tree Forests (Membership Number 037-05(A)).

All palm wax in our ranges are from Certified Sustainable Regenerated Forests.

4. SCENTED CANDLES – Soy

Soy candles are derived from soybeans. They have much longer burning times, liquefying during the burning process. The soy has a low melting point and contains no paraffin. MiKeRa soy candles are made from soy (from USA) containing quality essential oils from India and pure cotton wicks. Wicks must be trimmed to approx 1cm to help prevent sooting. Do not trim wick when candle is lit. Container should be placed on heat resistant surface. Glass votive may get hot, handle with care. Never leave a burning candle unattended.

5. INCENSE – Incense Gift Packs

Incense should be lit with a flame and then blown out once the tip glows red. The smoke drift will emit the fragrance and continue to burn down without a visible flame. The incense does turn to ash and should be placed in a holder. The incense cones burn in the same way. Never leave burning incense unattended.

6. DIFFUSER FLOWER – Gift Box with porcelain bowl

MiKeRa had developed a new concept in aroma diffusers. The decorative flower has a wick attached, that absorbs the quality European fragrant oil and diffuses it through the petals.

Directions for use: Pour fragrant oil into the porcelain bowl and place the flower over the top, with the wick fully submerged in the oil. It may take a few days for the fragrance to soak the flower, allowing the scent to subtly infuse the room, lasting for up to a month. Oil may cause staining. Avoid contact with eyes, skin, fabric and wooden surfaces. Keep out of reach of children. Keep away from open flames and heat.
